

CLEAN BENCH

The laminar flow Clean Bench is the most effective method of ensuring a clean zone around the critical work area. The work area can be kept to class 100 using horizontal and vertical laminar flow.

- Filtered Clean Air to class 100
- Buffer Tank ensures the product never enters the outside atmosphere
- Foot switch operated filling valve
- Sampling valve inside clean air zone
- High Efficiency Particle Air (HEPA) filter and fan
- Supplied with CIP/SIP link back to UHT so can be fully CIP'd and SIP'd
- Option of Buffer Tank plus 1 filler pipe.
- Option of no Buffer Tank and 2 filling pipes
